

CSI Mining program offers ALL coverages !

January 25, 2010

“Casualty & Surety, Inc, is about to enter its 5th year with our Arch Mining program. This program has been very successful over the years, generating a very profitable loss ratio and premium results. However, what we have not done, is make it known that we can do more! Almost all lines of coverage, either in the Arch program or with other carriers can be provided. I will outline this fact for you now.

Our Arch program allows us to quote in-house, the General Liability, Excess Liability, Auto, Inland Marine and Property. We can be very competitive with all these lines of coverage. Outside of our Arch program we have carriers that will allow us to write full Pollution coverage, Workers Compensation coverage, upper layers of Excess / Umbrella, Business Interruption coverage and Mechanical Breakdown coverage. As I mentioned, we can be a “One Source Shop” for your mining clients.

Additionally, as far as types of operations, we can write virtually any type mining operation. This would include Aggregates, Coal and Precious Metals. We can also write mining related accounts such as Machine Shops, various types of contractors to mining accounts and basically any account that delivers some service to mining accounts.

We will be mentioning all our capabilities when we work your submissions in the future. I just wanted you to be aware of all we can do. Thanks for your business and continued support.

Sincerely,

James Godfrey, President CSI
